### Burst Sells DVR Patent and Applications

Santa Rosa, CA: Burst.com, Inc. today announced that it has completed the sale of U.S. patent number 7,272,298 entitled "System and Method for Time-Shifted Program Viewing," and a series of 5 related patent applications, to a non-affiliated corporation, for \$2.3 million. The patent was issued on September 18, 2007. The purchaser was not publicly identified by mutual agreement of the parties to this transaction.

According to Burst.com Chairman & CEO Richard Lang, "After a lengthy process of evaluating the time and risk-weighted returns associated with alternative monetization paths, we determined that the best return for our shareholders, for this patent, was this sale."

"We plan to continue our efforts to monetize our intellectual property to benefit our shareholders" said Lang.
